Yes, it's up and running w very good removal based on Cu Hach tests.

Monday, we can discuss your joining onsite if you are available.

Steve

Does this mean the new system is coming along?

Hello Dave and Dave,

In light of the newly installed treatment system and operations underway at Gladstone, the need is reduced to continue with any additional support for the "temporary" water treatment system. Please provide me this week with an update on any findings / testing regarding the flocculent products and potential lime addition system set that have been developed since we last communicated. After providing that information, I request that any additional work be postponed pending our discussing that need.

If you have questions, please let me know. Thank you for you assistance on this effort.

Sincerely,
Steve
